Applicant's remarks concerning the restriction requirement have been carefully considered. Applicant traversed the restriction requirement by stating that the alternative process suggested by the examiner that could be used by the apparatus was allegedly not "realistic", not "practical", not "effective", and not "meaningful". Applicant is advised that these reasons are immaterial. In a restriction requirement distinctness is determined by demonstrating that the apparatus could perform another process. Whether that process would be realistic, practical, effective, or meaningful has no bearing on the distinctness issue. The restriction requirement is deemed proper and is hereby made FINAL.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 7 and line 11 there is no proper antecedent basis for "the attachment". In claim 2, line 3 there is no proper antecedent basis for "the hoe body portion" since this could be either the first hoe body portion or the second hoe body portion. In claim 4, line 5 the statement that "the prongs are sharpened" conflicts with claim 1, line 6 which states that the prongs are "blunted".

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Wright.

Wright shows a weed pulling hoe having a first portion at right angles to the handle and a second portion at an obtuse angle along a bending axis. The second portion includes a V-shaped gathering gap.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wright in view of Davis.

Davis teaches that a V-shaped gathering gap may terminate in a radiused notch.

To terminate the V-shaped gathering gap in Wright with a radiused notch would have been obvious for one skilled in the art at the time the invention was made in view of the disclosure of Davis. One of ordinary skill in the art would have been motivated to do this in order to facilitate a more conforming grip on the weed.

Claim 5 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 8/29/05.
